ABSTRACTS FROM ANNUAL STATEMENTS

The following explanation is made in connection with the statements on the following pages to assist the user wherever it is thought there may be doubt as to the meanings of any of the items.

INCOME

ALL OTHER RECEIPTS AND TOTAL INCOME. Certain amounts are omitted in order to eliminate all bookkeeping items and arrive at the actual income, viz.: "Borrowed Money," "Gross Increase, By Adjustment, in Book Value," or similar items. "Dividends Left With the Company to Accumulate at Interest," "Agents' Balances Previously Charged Off," "Gross Profit on Sale or Maturity of Ledger Assets," are included only net, i. e., a deduction is made from both the income and disbursements equal to the smaller of the income and the corresponding disbursement item.

DISBURSEMENTS

DEATH CLAIMS, including additions and disability claims. Both disability and double indemnity claims are included.

EXPENSES OF MANAGEMENT. Total insurance and investment expenses paid during the year, according to the Gain and Loss exhibit. Charges against surplus are not included, but it is made up of all expenses directly chargeable to production, management and investment.

ALL OTHER DISBURSEMENTS AND TOTAL DISBURSEMENTS. Certain amounts are omitted in order to eliminate all bookkeeping items and arrive at the actual disbursements, viz.: "Borrowed Money Repaid," "Gross Decrease, By Adjustment, in Book Value of Ledger Assets," or similar items. "Dividends and Interest Thereon Held on Deposit Surrendered During Year," "Agents' Balances Charged Off," "Gross Loss on Sale or Maturity of Ledger Assets," are included only net; i. e., a deduction is made from both the income and disbursements equal to the smaller of the income and the corresponding disbursement item.

LIABILITIES

LIABILITIES. Refers to the total amount apportioned, excluding Capital Stock and Unassigned Funds only. Where a Company maintains a mortality reserve or contingent reserve for definite or general purposes, it is included in the preceding item, "Surplus or Special Funds Apportioned." Where any portion of this amount is not a contractual liability, it is covered by note.

GAIN AND LOSS EXHIBIT

The three sources of Gain and Loss, Loading on Premiums, Interest and Mortality, are analyzed in this department, and ratios presented. The use of ratios in comparing one company with another does not always do justice, on account of the different classes of companies and the variation in business done. The following explanation is made to bring out these differences.

RATIO OF NET INTEREST TO MEAN INVESTED ASSETS. Mean Invested Assets is the mean of the total ledger assets less money on deposit not at interest. In some companies the investment departments are not entirely separated from the other branches and the proportion of certain items of home office expense, such as officers' and clerks' salaries, and rent, is not always charged to investment; hence the company may secure credit for a larger net interest earning than was really made, in comparison with companies which made these deductions.

COST OF PROCURING NEW BUSINESS. "Ratio to First Year Premiums" and "Per \$1,000 of New Business." The cost of procuring new business is taken from the standard state report blank under the heading "Total Expense Chargeable to the Procurement of New Business," so that it should be uniform for all companies. This item includes "Commissions on first year's premiums," "Compensation not paid by commission for services in obtaining new insurance, exclusive of salaries paid in good faith for agency supervision either at the home office or at branch offices," "Medical Examinations and Inspections of Proposed Risks," and "Advances to agents." First Year Premiums refers to premiums on original policies. New business refers to original issues and does not include revivals and increases.

INSURANCE EXPENSE, LESS ACQUISITION COST. "Ratio to Premium Income" and "Per \$1,000 Insurance in Force." As the greatest expense is incurred during the first year in securing new business, a ratio showing total insurance expenses to premium income is unfair to the new company, whose new business is a comparatively large portion of its total business in force, as compared to the old company with a large amount of insurance in force, and to the company which is pushing actively for business as against the company which is writing a comparatively small amount of new business. This second pair of ratios represent, therefore, the cost of taking care of the business exclusive of the acquisition cost. "Insurance Expense Less Acquisition Cost" being the total insurance expense less "Total Expense Chargeable To the Procurement of New Business." These ratios are to total premiums income and total insurance in force, rather than to renewal premiums and old business, as after acquisition cost has been paid, a considerable proportion of home office expense is still chargeable to new business, in getting the business on the books. These ratios equalize the differences between participating and non-participating companies; between the company which is writing a large proportion of high-rated business and the company writing a large proportion of term business.

RESERVE BASES

Reserve Bases are shown on Policy Analysis pages under "Cash Values" and at the bottom of Surrender Value pages. In "General Information" is shown the amount in force on each basis.

Many states have adopted minimum reserve bases lower than the full level premium basis, which allow companies to use some share of the reserve of the earlier years of the policy for expenses. As these various standards are referred to throughout THE UNIQUE MANUAL DIGEST, it is thought well to include a brief description of each.

FULL PRELIMINARY TERM basis allows the full first year's premium, less actual mortality, to be used for expenses, a higher net premium, based on the full reserve at an age one year higher, being put up the second and following years.

STRAIGHT MODIFIED PRELIMINARY TERM allows on Ordinary Life the use of the full first year's premium, less actual mortality, for expenses, as on the full preliminary term plan; but on all forms with a higher premium than Ordinary Life, only a sum equal to the sum available under an Ordinary Life policy at the same age may be used for expenses, the excess being put up as reserve on the policy.

Various states have made further modifications of the modified preliminary term plan:

RHODE ISLAND, OHIO AND WEST VIRGINIA standards. Straight modified preliminary term, except that on Whole Life and Endowment policies with twenty or more annual premium payments, the whole first year's premium, less actual mortality, may be used for expenses.

ILLINOIS, INDIANA, NORTH AND SOUTH DAKOTA standards. On twenty payment life policies and on those having a lower premium, the whole of the first year's premium, less actual mortality, may be used for expenses; on policies having a higher premium, excess must be put up as reserve. This standard has been quite generally accepted. A number of states have adopted it, as well as companies in states with a lower minimum standard. New York State accepted this basis in 1923 as a standard under which companies could operate; the Select and Ultimate being the minimum standard up until that time.

MICHIGAN AND TENNESSEE standards: On policies having a premium paying period of twenty years or more, the whole of the first year's premium, less actual mortality, may be taken for expenses. On policies with premium paying period of less than twenty years, excess of premium over twenty payment policy on the same plan must be put up as a reserve.

NEW JERSEY standard: Straight modified preliminary term, but reserve must equal full level premium reserve by end of seven years.

WISCONSIN standard: First year, same as Illinois, but allows larger reductions for the next four years.

SELECT AND ULTIMATE: Another modification of the full level premium reserve is the "Select and Ultimate" Method, which is based on the fact that, as a result of the medical examination, the mortality during the early years of the policy is less than during the later years. This table gives the company the benefit of the mortality savings of the first five years to be used for expenses, the reserve equaling the full level premium reserve by the end of that time.
